

When it comes to installing solar hot water, Jackgreen is the name to trust.

With the best products and the best advice, we've helped hundreds of thousands of Australian households to save energy and money.

Through our energy efficiency projects, we've stopped over 4 million tonnes of carbon pollution from going into the atmosphere. That's equivalent to taking around 1 million cars off the road.

We're successful because we make it easy for people. We make it easy to be green.

**Why not save money while reducing
your carbon footprint?**

**Now is the time
to invest in a
Jackgreen Solar
Hot Water System**

We have a system available to
suit every family size and budget

Flat-plate solar collection technology

Flat-plate solar collectors are the most commonly used technology for households due to their cost effectiveness and overall efficiency. The technology works by absorbing solar radiation and transferring it into a fluid that circulates through the solar collector in tubes.

Flat-plate collectors can be mounted in a variety of ways, depending on the type of house and size of the collector. They are generally mounted on the roof.

There are two general circuit types – open and closed circuits. If you live in a frost prone region, we recommend a closed circuit system. This will protect your hot water system from frost damage.

A correctly sized solar water heater can provide around 60-70% of a household's hot water needs over a year. Configuring the system with back up electricity or gas boosting will ensure a guaranteed supply of hot water regardless of sunlight levels.

About us

Jackgreen Energy Save believes in providing the community with simple, convenient and cost effective options to make a positive environmental change for the wellbeing of our families and generations to come.

Product Advantages

- ✓ Gas or electric system options available so you can install a system based on your current supply
- ✓ Multiple tank sizes – regardless of the size of your household, there is a tank size to meet your needs, ensuring your family always has hot water
- ✓ Generous Government rebates available to reward you for playing your part for the environment
- ✓ 5 year comprehensive warranty – gives you peace of mind that if anything goes wrong, it won't be an out of pocket expense

- ✓ Save money on your electricity bills and stop losing up to \$700* per year
- ✓ Advanced design that is reliable and durable in all weather conditions

Rebate Information

The State and Federal Government rebates are available to owner-occupiers who are replacing an existing electric hot water system up to the value of \$2800.

The rebates generally take around 10-12 weeks to process.

Renewable Energy Certificates (RECs)

RECs are created as a result of the installation of the solar hot water system. This offer is available based on your agreement to assign the RECs to Easy Being Green Pty Ltd (trading as Jackgreen Energy Save). This will be an additional discount at the point of sale off the cost of your solar hot water system.

The amount of the discount varies based on the system choice and area of installation.

The Jackgreen/ ANZ credit card

We have a six month interest free credit card option available.

Using this payment option means you won't be financially out-of-pocket (subject to approval by ANZ) while waiting for the Government to process your solar hot water rebate application.

Now is the time to invest in a solar hot water system from Jackgreen Energy Save!
